CATALOGUE

OF THE

PHÆNOGAMOUS

AND

VASCULAR CRYPTOGAMOUS PLANTS

OF

MISSOURI.

FLORA OF MISSOURI.

By S. M. TRACY.

State University, Columbia, Mo.

The following catalogue is, I believe, the first publication of any list of the plants of the State, excepting a "Partial Catalogue of the Plants of Illinois and Missouri," published by Mr. Geyer about 1842 which has long been out of print. The present catalogue was commenced more than five years ago, but the press of other important work has prevented its earlier publication. Even now there are doubtless many species which are not included as there are some sections of the State which I have been unable to visit, and from which I have found it impossible to obtain lists. The counties along the central part of the Southern boundary, and the extreme Northern and North-eastern portions of the State have not yet been carefully studied.

The sources from which this catalogue has been made are; the herbarium of the State University which includes valuable collections made by the State Geological Survey, Prof. Swallow, Dr. Pech of Louisiana, Mr. Geyer and Dr. Engelmann of St. Louis and others; the "Flora of Jackson County" and extensive notes from Frank Bush of Independence; notes and specimens from Prof. G. O. Broadhead of Pleasant Hill, Geo. W. Letterman of Allenton; Mrs McCluney of Sedalia, and many others. I am indebted to Prof. Trelease of Washington University for access to the Riehl collection of Missouri plants, and to Mr. B. T. Galloway of Columbia, who has done the entire work of preparing the list of grasses, and has furnished notes upon many other plants. Free use has been made of the various published works of Dr. Gray, and the government reports of King and Wheeler. During the past twelve years I have visited many parts of the State, and have preserved a careful record of plants observed in the different localities. Nearly every plant named in the catalogue has been carefully examined by myself, and doubtful specimens have been referred to Dr. Gray, Vasey or other recognized authorities for verification. I have

endeavored to make the list accurate and have not included species of whose presence here I was not fully satisfied.

The arrangement of the catalogue is made to conform to that of Bentham and Hooker, and the nomenclature to that of "Gray's Flora of North America," and "Gray's Manual" fifth edition. In giving localities I have, in most cases given the names of the counties where found, followed by the names of the person who collected the specimen now in the University herbarium, or reporting its presence. The catalogue contains the names of 123 orders with 1786 species and varieties.

From the present incomplete list it will readily be seen that the State has four well defined botanical regions. First, river bottom lands extending along the entire length of the State on the East and through its central portion along the Missouri river, and its larger tributaries. Second, the swamp region of the Southeast. Third, the Ozark region, including the hilly and broken country which covers a large portion of the State South of the Missouri river. Fourth, the prairie region which includes a large portion of the State North of the Missouri river, together with the Northwestern portion of the part of the State South of the Missouri river. In the extreme Northwest, the flora assumes a character much resembling that which is typical of the Western plains. The constantly changing character of the flora of a newly settled country, makes it practically impossible to make a list which is complete in all its details, as new plants are yearly introduced, or are found in new localities driving out the earlier forms and producing constant changes. When the State was organized our hills and prairies produced an abundant growth of buffalo grass which soon gave place to the blue joint which is, in turn being driven out by the more valuable blue-grass. With cultivation came purslane, dandelion, lambs-quarter and hosts of other troublesome weeds from the East, and within the last ten years the prickly solanum has immigrated from the far West and now seems perfectly at home in the streets of St. Louis.

It is earnestly desired that the catalogue be made as complete as possible, and to this end botanists and all others are requested to send notes and specimens of plants not named in the present catalogue, or from new localities. All such specimens will be placed in the University herbarium, and duly acknowledged in future editions of the catalogue.

DECEMBER 31, 1885.
